English 

Reference letter

In the last century we worked with the company BOCO PARDUBICE on repairing screws and barrels for our extrusion machines. The oldest machine from the company BOCO had been working constantly for more than 10 years in full satisfaction and the company bought it from us some time ago in the form of trade-ins for a new extruder. Between those long years we had built and put into operation 6 extruders in cooperation with the company BOCO. The last generation of extruders with integrated drier for input material has significantly improved our production and the appearance of our products. We are glad that the company BOCO met our requirements and developed for us the tailored machine BOCOMATIC.
